

Near Parsival 1 is ship ORG.
 We may need to adjust location
 At time of deployment. Want to
 Include a few extra feet of cable.
 IRT mounted below top rail as is the
 VCEIL. These won't be in field of view
 Of other instruments.
 TSI, MWR and CSPHOT could block field
 Of view of one another so trying to
 Spread apart as much as possible.
 Parsivals can be mounted to be lower
 Than PRP so the radiometers don't see
 Them. AOS stack and satellite will be in
 Field of view of PRP2 but can't be helped
 MWR3C will be slightly lower than MWR

SCENARIO 2B LAYOUT
